

OpSus Defend

Security-as-a-Service.

Powered by Fortified Health Security.

THE CHALLENGE

Cybersecurity threats and attacks on the healthcare industry are constantly multiplying and evolving. Malicious actors have become more sophisticated in exposing patient data and exploiting their value. Although executing the fundamentals such as monitoring and patching are the foundation of a security program, many organizations find themselves unable to keep up with these routine tasks while deploying new technologies to stay ahead of the modern-day attackers.

The best prevention is to maintain an organizationally enabled cybersecurity team with healthcare expertise, but this can be difficult and expensive to build. Healthcare organizations need a way to meet these ever-evolving threats to patient data and maintain compliance to federal regulations.

THE SOLUTION

OpSus Defend powered by Fortified Health Security is a suite of managed security services delivered from the OpSus Healthcare Cloud. OpSus Defend allows healthcare organizations to add layers of professionally managed security to their on-premise or cloud-based systems infrastructure. Available as individual services or bundled into packages, OpSus Defend offers healthcare organization access to top cybersecurity specialists to:

- Strategize, create, and document cybersecurity programs while assessing them against federal regulations
- Continuously monitor alerts and threat hunt for possible vulnerabilities
- Respond to attacks and guide remediation through well-documented processes

ADAPT TO THREATS WITH MANAGED SECURITY SERVICES

OpSus Defend uses award-winning processes combined with extensive experience in healthcare cybersecurity to better protect patient data. From initial assessment through successful outcomes, security becomes a robust layer of evolving defenses. Our approach to risk mitigation provides a wide variety of purpose-built services to help healthcare organizations evaluate their unique risk appetite, strengthen their cybersecurity posture, and improve operations throughout their security journey.

OpSus Defend Services Include:

- Continuous Monitoring
- Monthly Touchpoints with Consultative Guidance
- Progress and Trending Reports
- Access to Top Cybersecurity Specialists with Healthcare Expertise

ADVISORY SERVICES

Assessing your environment for vulnerabilities while exploring the likelihood of an incident and the magnitude of its potential impact on your healthcare organization is a regulatory requirement. Second to that is making progress on reducing these vulnerabilities through well documented plans. With Advisory services, top advisors work with your team on a continual engagement to mitigate these risks.

- Security Risk Assessments (HIPAA Risk Assessment, NIST Cybersecurity Framework, HITRUST CSF)
- Virtual Information Security Program
- Third Party Risk Management

HEALTHCARE SECURITY OPERATION CENTER (SOC) SERVICES

Early detection is key to building a cybersecurity program that can prevent threats from becoming major incidents. With our 24x7x365 healthcare specific Security Operations Center, trained analysts are on hand to detect and respond to alerts while understanding the nuances of a healthcare environment.

- Security Information and Event Management (SIEM) Program
- Managed Connected Medical Device Security Program (IoT/IoMT)
- Managed Detection and Response (MDR)
- Managed Phishing and Education
- Dark Web Monitoring Program

THREAT ASSESSMENT & INCIDENT RESPONSE

Proactively using threat intelligence to hunt for vulnerabilities, continually testing your environment, and conducting real-world simulated exercises are ways to validate the effectiveness of a security program. The OpSus Defend Threat Assessment and Incident Response team provides a relationship that results in actionable information and partnership-level responsiveness with these services.

- Vulnerability Threat Management (VTM) Program
- Penetration Testing Service
- Incident Response Retainer Program
- Emergency Response Services
- Compromise Assessment / Threat Indicator Assessment

CloudWave offers a complete suite of services to provide customers with options for end-to-end EMR/EHR, Imaging, and enterprise systems support and management.

About Fortified Health Security

Fortified Health Security is committed to protecting patient data and reducing risk throughout the healthcare ecosystem. As a managed security service provider, Fortified works alongside healthcare organizations to build tailored programs designed to leverage their prior security investments and current processes while implementing new solutions intended to reduce risk and increase their security posture over time. Fortified's high-touch engagements and customized recommendations maximize the value of investments and result in actionable information to help reduce the risk of cyber events.

CloudWave works with Fortified to match security resources with technical expertise to help customers address their security concerns.
