OpSus Cybersecurity Suite

Strengthen Your Security Posture in Less Than 90 Days With CloudWave's Cybersecurity Suite

The Cybersecurity Suite provides end-to-end data protection with secure, compliant healthcare-grade cloud services that:

Backup Your Data - The cornerstone of any cybersecurity program is the ability to recover from an attack without being held hostage to ransomware. Our OpSus Backup service centralizes and simplifies your enterprise-wide backups using an edge appliance for fast local restores in combination with intelligent caching to short and long term secure multi-cloud datastores. CloudWave fully manages the solution from our NOC and delivers periodic reporting on key system metrics. Our service creates air-gapped remote backups for an added level of protection, and can additionally include a healthcare-tuned archive component that efficiently protects high volume imaging and analytics data stores.

Defend Against Threats – The OpSus Defend healthcare security team assesses your individual needs, provides any necessary audits and assessments, and then implements missing tools and analytics and monitors your environment 7x24x365 as if it was our own. Security events are correlated using both expert human security resources and AI-based systems and you are directly notified along with response options. Testing and vulnerability scanning ensure your environment remains secure and contract CISO services are available where needed.

Recover Quickly – CloudWave is recognized as the most experienced, proven provider of cloud-based Disaster Recovery solutions in healthcare. Our OpSus Recover service offers a full range of recovery options from simple public cloud vaulting to total enterprise systems failovers with well under 2 hours RPO/RTO. We run hundreds of successful, auditable DR tests for customers every year and respond to multiple security and geo disasters every single year for our hospital customer base, providing secure managed hosting services while their site is rebuilt or revalidated.

Respond With Resources – Certified security, cloud, systems and storage experts are ready to deploy at a moment's notice to help you manage your response to adverse cyber events.

About CloudWave

From OpSus Live fully managed hosting services to remotely managed cloud edge compute solutions, CloudWave is a recognized leader in healthcare cloud managed services with deep roots in healthcare IT operations. CloudWave helps healthcare organizations rationalize and migrate IT services like compute, storage, backup, archiving, digital workspace, disaster recovery and security to AWS, Azure, GCP, and compliant private and edge clouds. We offer a spectrum of managed services to assist hospitals with security and operations. Dedicated, USA-based 7x24x365 Network and Security Operations Centers are staffed by certified healthcare IT and security professionals and operated to strict SLAs.
